Heena Gohil | DevOps Engineer

Mumbai, India | +91 90048 87618 | gohilheena456@gmail.com | linkedin.com/in/heena-gohil-1ab459315

SUMMARY

DevOps Engineer with 4+ years of experience designing, automating, and optimizing cloud and on-premise infrastructure. Experienced in CI/CD pipeline automation, containerization, orchestration, and Infrastructure as Code. Proven ability to improve deployment efficiency, reduce deployment time by 40%, and manage large-scale telecom infrastructure supporting 5G network functions. Skilled in AWS, Docker, Git, Kubernetes, Terraform, Jenkins, and Ansible with strong expertise in monitoring, troubleshooting, and high-availability system operations.

TECHNICAL SKILLS

- **DevOps & CI/CD:** Jenkins, Git, GitHub, Phabricator
- **Containerization & Orchestration:** Docker, Kubernetes, Docker Swarm
- **Cloud Services:** AWS(EC2, CloudWatch, IAM, S3, VPC, ECR, ECS, CodeCommit, CodeBuild, CodeDeploy, CodePipeline, RDS) and GCP.
- **Monitoring & Logging:** Prometheus, Grafana
- **Infrastructure as Code:** Terraform and Ansible
- **Networking & Diagnostics:** NFV, Wireshark
- **Scripting:** Bash
- **Operating Systems:** Linux, Windows
- **Tools:** Artifactory, Postman, OS Ticket

WORK EXPERIENCE

DEVOPS ENGINEER - DEPUTY MANAGER

Reliance Jio Infocomm Limited, Navi Mumbai

Nov 2021 – Present

- Collaborate with cross-functional development and operations teams to ensure reliable, scalable deployments on the JIO MANO orchestration platform.
- Designed and maintained Docker Swarm clusters for containerized microservices and resolved node failures using system logs and network analysis tools.
- Automated CI/CD pipelines for 20+ microservices using Jenkins and Ansible, reducing deployment time by 40% and minimizing manual configuration errors.
- Deployed and managed containerized 5G Network Functions using Kubernetes with YAML manifests for scalable and fault-tolerant deployments.
- Executed Ansible playbooks across 10,000+ nodes for automated production readiness checks and pre-deployment validation.
- Implemented Prometheus and Grafana monitoring systems providing real-time performance metrics, alerts, and system observability.
- Independently managed end-to-end project lifecycle across GCP, IoT, and production environments, including deployment validation, application testing, and API verification.
- Built and managed Docker images for microservices applications including volume management and container lifecycle operations.
- Supported incident management, troubleshooting, and operational stability for large-scale telecom infrastructure environments.
- Participated in cloud migration initiatives moving microservices workloads from on-premise infrastructure to AWS environments.

KEY DEVOPS PROJECTS

1. CI/CD Pipeline Automation for 5G Network Functions

Technologies: Jenkins, Ansible, Git, Artifactory, Docker

- Designed and implemented automated CI/CD pipelines integrating build, test, and deployment stages.
- Automated deployments for 20+ microservices improving release reliability and reducing manual intervention.
- Integrated artifact storage and version control workflows across development teams.

2. Kubernetes Deployment and Scaling for Network Functions

Technologies: Kubernetes, Docker, YAML

- Designed Kubernetes manifests for deploying containerized 5G network functions.
- Implemented scalable container orchestration and optimized cluster resource utilization.
- Enabled high availability and resilience through containerized deployments.

3. Cloud Infrastructure Setup and Migration to AWS

Technologies: AWS, Docker, Terraform

- Currently involved in migrating microservices-based applications from on-premises infrastructure to AWS cloud using containerized environments.
- Building and testing Docker-based application environments to ensure portability across on-premise and cloud infrastructure.
- Supporting deployment of containerized microservices on AWS environments while ensuring high availability, scalability, and optimized resource utilization.
- Assisting in integrating CI/CD pipelines with AWS infrastructure to enable automated build, containerization, and deployment of microservices.

4. Ansible Automation for Production Health Checks

Technologies: Ansible, Linux

- Developed Ansible playbooks to automate daily production health checks across 10,000+ nodes.
- Automated server status reporting and integrated alerts with monitoring tools.
- Reduced operational workload by 30% through infrastructure automation.

CERTIFICATIONS

- AWS Cloud Technical Essentials
- Kubernetes Fundamentals

EDUCATION

B.E IN ELECTRONICS AND TELECOMMUNICATION

Atharva College of Engineering | 2017 - 2020

CGPI: 8.56

DIPLOMA IN DIGITAL ELECTRONICS

Shri Bhagubhai Mafatlal Polytechnic | 2013 - 2017

86.87%

SECONDARY SCHOOL CERTIFICATE (SSC)

Sheth D.M. High School | 2013

91.45%

INTERNSHIP

TRAINEE

Larsen & Toubro Limited | 12/2016-06/2017

TRAINEE

N.M. Automation & Control Private limited | 06/2015-12/2015
